

Clinical Biostat ER skill library

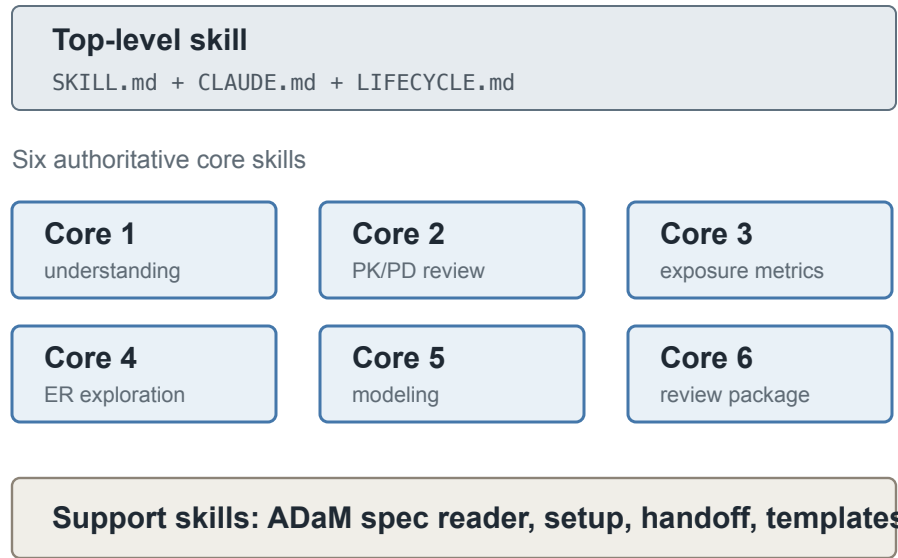

Instruction surfaces, runtime modules, ClaudeCode evals, and reference-result reproducibility as one governed system

Current frontier

Case41/42 prepared

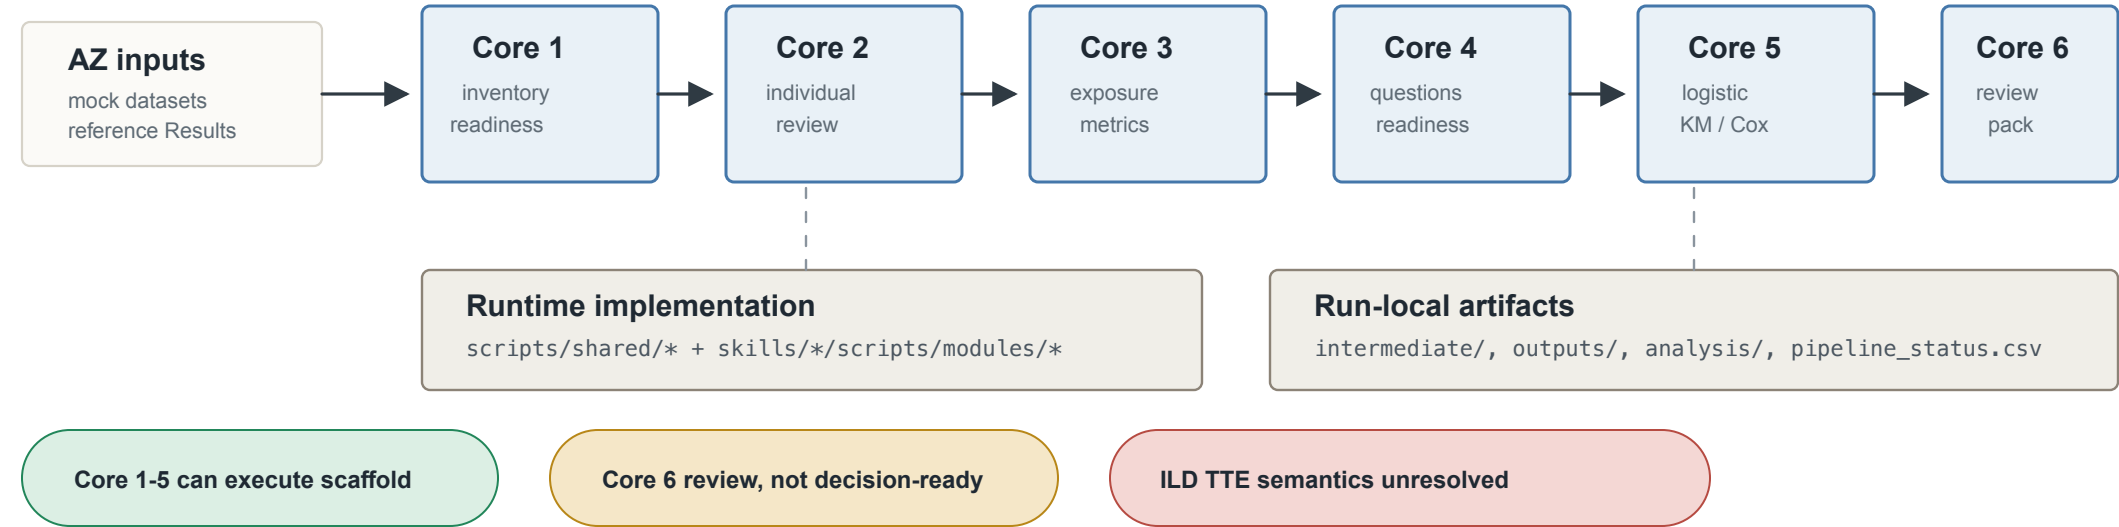

A Skill bundle contract

What ClaudeCode is allowed to read, run, and claim

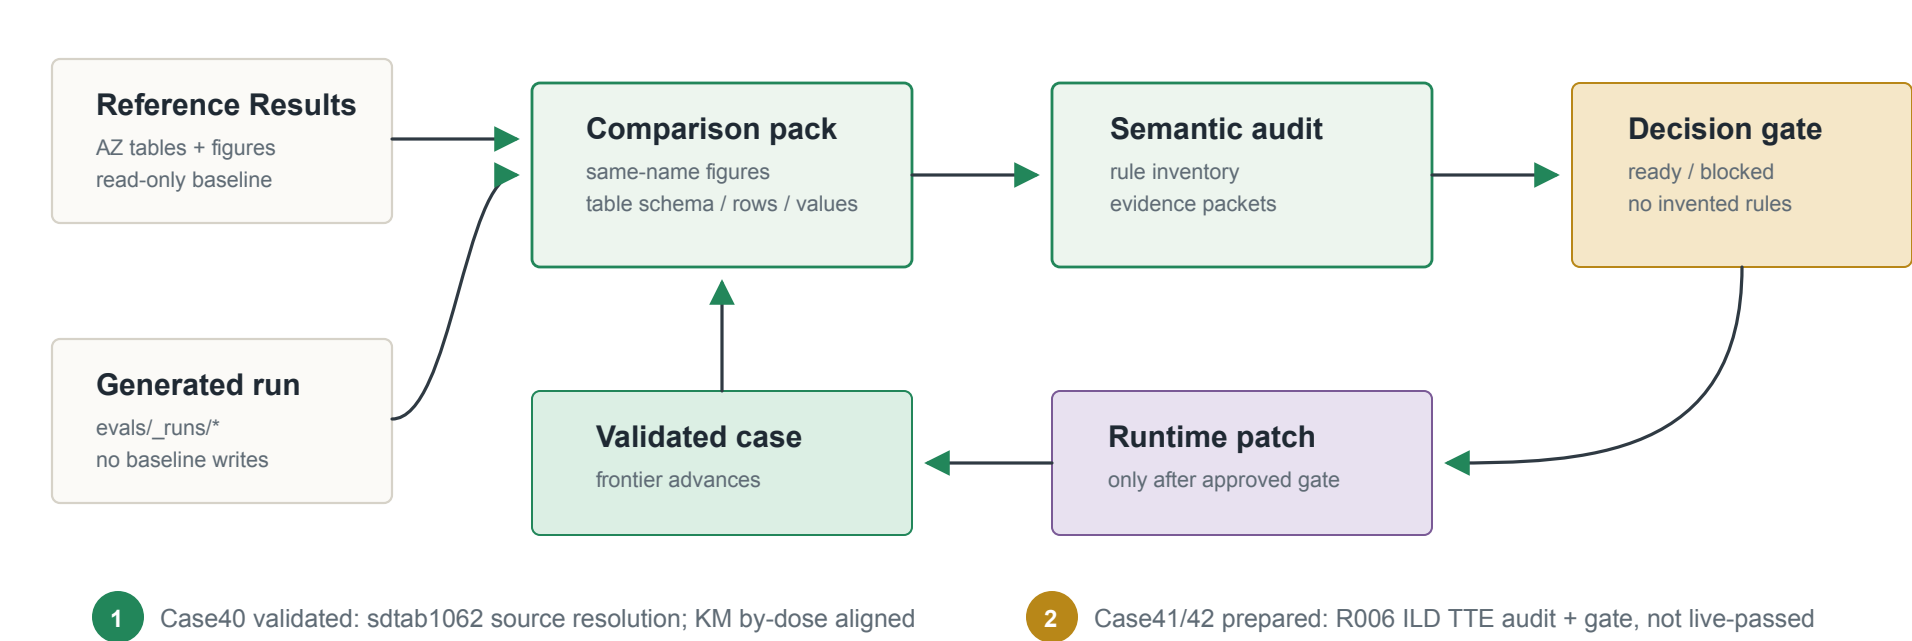

B Executable ER workflow

Baseline data are read-only; generated artifacts live under eval run roots

C Evaluation and semantic-parity loop

Reproduction is treated as evidence, not as a success label

D Test and guard surface

Tests verify contracts, reproducibility harnesses, and agent behavior
